MANUALLY OPERATED SEALING TOOL FOR METAL AND PLASTIC CAPSEAL

DESCRIPTION :

Sealing tool is meant to seal metal capseals on to curled wall of flange fitted on drum to make the drum leak proof and tamper proof. Flange & plugs gaskets make drum leakproof. In case bung is little loose the leak through flange thread is sealed by capseal sitting on curled wall of flange.

Apart from metal capseals, there is also plastic capseal with aluminium ring which needs the separate sealing tools

OPERATING PROCEDURE

- 1) Bring both arms upwards near each other. Jaws will open.
- 2) Place capseal on drum top simultaneously. Ensure bung is placed in position & tightened.
- 3) Push both the leverarms downwards. (max. Movement around 90°)
- 4) Jaws come closer & capseal gets curled over flange. In plastic capseal the aluminium ring is pressed around edge of curled flange.
