Low Profile, Low Cost Spill Containment Helps Meet Regulations – Takes Up Minimal Storage/Shipping Space.

- Functions like other spill decks / platforms but disassembles into smaller components when not in use - saves valuable storage space and shipping costs.
- Outer yellow sump is constructed of heavy-duty, 18.5 oz. PVC material - folds/rolls down easily for convenient storage.
- Decks can be connected with optional Bulkhead Fittings to create a custom spill containment area.
- Incidental spill and leaks are contained within the sump. In the case of a catastrophic spill, the bladder (included with Spill Deck Bladder System Model) will automatically deploy providing an additional 66 gallons of capacity.
- Polyethylene grating is easily removed for quick clean-up.
- Quick and easy to assemble.
- Custom sizes and colors available.
- **Meets SPCC, EPA Container Storage Regulation 40 CFR 264.175, and UFC Spill Containment Regulations.**

1352
Funnel not included.

1360

In the case of a catastrophic spill, the bladder will automatically deploy.

Modular units can be connected in almost any configuration. Bulkhead Fittings (p/n 1073) are used to secure units together and to allow each adjoining unit to share its capacity with the other Spill Decks in the system. (NOTE: Ultra-Spill Decks meet SPCC and EPA and Uniform Fire Code Spill Containment Regulations in configurations of twelve (12) drums or more.

Low-profile height allows drums to be loaded without the use of a ramp.
